LinkedIn-UPPALAPATI YUKTHA SIRI

Summary

Computer Science student specializing in Data Science and Big Data Analytics with strong foundations in Java, Python, and SQL. Experienced in building **backend-driven web applications**, integrating **databases**, and working with **data analysis** concepts through academic projects. Familiar with API-based communication concepts, and scalable system design.

Education

KL University— B. Tech in CSE (Data Science and Big Data Analytics), CGPA: 9.29	2023-present
Sri Chaitanya Junior College — Intermediate (MPC), Marks: 967/1000	2021-2023
Sri Chaitanya School-(SSC) CGPA:10	2020-2021

Skills

Programming Languages: Java, Python, C

Web Technologies: HTML, CSS, JavaScript, Flask

Databases: MySQL, MongoDB, Fast API, REST APIs

Core Concepts: DSA, DBMS, OS, SE, Backend Development, Data Analysis, OOP, Computer Network, Web Technologies

Projects

Cart Companion – Social Commerce Platform (*Python, Flask, HTML, MongoDB*) | 2024

- **My Role:** Worked on backend development using Flask, implementing routing, session handling, and user interaction logic.
- **Concept:** Developed a social commerce web application that enables users to shop together online through shared collaborative sessions. Interactive social shopping platform that synchronizes product browsing and supports real-time communication to replicate the in-store shopping experience virtually
- Designed responsive user interfaces using HTML for smooth user experience.

Meal Mate – Smart Recipe & Meal Planner (*Python, Flask, HTML*) | 2025

- **My Role:** Worked as a Backend Developer, implementing application logic, routing, and request handling using Flask.
- **Concept:** Personalized recommendation and meal planning system that dynamically matches user-provided ingredients with stored recipe data to suggest suitable dishes and support decision-making.
- Developed user interface using HTML for ingredient input and recipe display.

AI Resume Analyzer – Resume Screening Web Application (*Python, stream lit*) | 2026

- **My Role:** Engineered the complete application, including backend logic, skill extraction, and UI design using Stream lit.
- **Concept:** Analyzes resumes against job descriptions using skill-based matching to calculate compatibility scores. Implemented PDF parsing, skill extraction, match scoring, and improvement suggestions.
- Planned an interactive user interface with visual charts and downloadable analysis reports.

Published Research Paper – IJSER (April 2025)
